

Qeios

**Social Media Management
Internship**

We bet you love science.

If you really do, don't miss the opportunity to work for 6 months for a thriving science publishing start-up. It's called Qeios (qeios.com), and the core team is AMAZING. 🤖

In case you decide to jump on board, you'll have the possibility to get in touch with the most prominent scientists and universities around the globe.

And you'll be in the front line in this – you'll be responsible for the daily operations with our social media, mainly Twitter, where scientists engage in cool-down discussions (actually, sometimes they're pretty hot! 🔥). Shoot a glance at our Twitter profile – [@qeios](https://twitter.com/qeios).

Reach out to the co-founder and CEO Gabriele at gm@qeios.com with a short motivational letter. You'll have fun! 😊

Thanks so much, have a nice day.

Qeios in a nutshell.

At Qeios we are building the future of research. We provide researchers with a web platform to create and publish top-notch, free-to-read research, faster.

This is a radical alternative to traditional academic publishers, such as

Elsevier, Springer Nature, and Wiley. 💪

We launched Spring 2019 and have reached 9,000+ registered scientists and 5,300,000+ views for the published works. Qeios articles have been featured in *The Economist*, *Financial Times*, *WIRED*, and many other top news media, and have influenced national and international (WHO) guidelines. Among the authors are many world's top researchers, such as Jean-Pierre Changeux, Robert West, and Susan Michie, from leading research universities, such as Stanford, Cambridge, and Harvard. 🤔
